IP Pull Cord Callpoints

Water resistant, wall or ceiling mounted callpoints that initiate calls on the Tacera Nurse Call System. The cord has a wipe-clean surface and has its own strain relief to ensure reliable operation without any possibility of damage. Standard features include a reassurance LED, tone sounder for audibly or visually impaired patients and call mute mode for cleaners.

Pull Cord Callpoints fit into standard electrical wall boxes, reducing installation times and costs. Manufactured from an impact-resistant polycarbonate / ABS plastic, all Pull Cord Callpoints feature concealed stainless steel fixings to maximize the life of the callpoint and reduce maintenance costs.

Lower “Whole-of-Life” Costs

Pull Cord Callpoints are IPnet and feature plug-and-play functionality. They are connected in series using only standard CAT5/6 cable that also provides POIPnet (Power Over IPnet).

Each callpoint has a unique address and is supplied configured for immediate use. Once connected, the callpoint is quickly and easily assigned to a room using a browser, which simplifies the process and reduces the cost of installation and commissioning.

The system continuously checks the functionality of each device and immediately notifies maintenance staff if any problem is detected. Pull Cord Callpoints are hot swappable, making maintenance a breeze – simply replace a callpoint and use a browser to quickly configure the new device.

» Low activation force
» Easy to clean vinyl cable prevents spread of bacteria
» Suitable for wet areas
» To prevent damage strain relief will break above a 22.05lbs
IP Pull Cord Callpoints

Easy to Identify and Use

These callpoints feature a pull cord with handle that is brightly colored and clearly labelled for easy identification.

Users initiate a call by pulling on the pull cord.

All callpoints are connected on the IPnet patient area network to all other components of the Tacera system to initiate communication between nursing staff and patients.

Water Resistant

Pull Cord Callpoints are typically installed in bathrooms, toilets and other wet areas, so are supplied with a water resistant silicone rubber boot that ensures an IP 65 rating. The boot seals the callpoint at the back (where moisture ingress normally occurs) and between the wall plate and wall.

Improved Infection Control

These ergonomic callpoints are wall or ceiling mounted with a pull cord that has a wipe-clean surface for improved infection control. Each wall mounted Pull Cord Callpoint has a separate CANCEL button that illuminates red, giving visual reassurance that a call has been initiated. A separate Cancel Callpoint is required for ceiling mounted Pull Cord Callpoints.

The Austco pull cord replaces traditional unsanitary nylon woven cords with a user friendly vinyl pull cord.

To avoid nuisance alarms during cleaning, the callpoint incorporates a cleaning mode. The cleaning time and date is logged on the central server, providing an important audit trail for infection control compliance.

Compliance

Designed to comply with:
- UL 1069 Hospital Signaling and Nurse Call Equipment.
- C-Tick Electromagnetic compatibility.
- CE Mark of European Conformity.

Manufactured in general accordance with the requirements of international quality assurance standard ISO9002.
